BlueM Oven Standard Operating Procedure

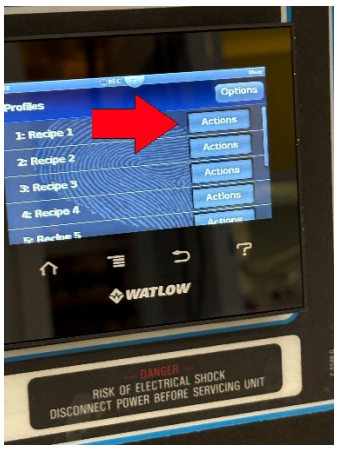

All operations will be performed using the Watlow controller on the front of the tool.

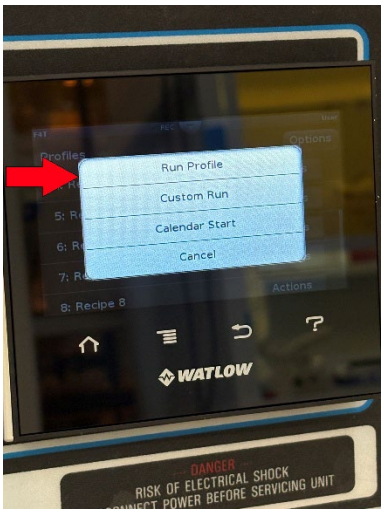

Recipes will be added to the controller by the Tool Supervisor only, users will not input their own parameters. If you need a recipe that you do not find on the recipe list, email the Tool Supervisor with detailed parameters and it will be added to the controller.

1. To select a recipe, on the home screen of the Watlow controller, press “Profile Actions”. If you mistakenly press something on the screen you can use the “Back”  button to return to the previous screen.

2. Next, find the recipe you would like to run and press “Actions”.

3. Next, select “Run Profile”, and the recipe selected will start.

4. Should you need N2 flow during operation, use the N2 flow control. DO NOT exceed 100.

- Should you start a recipe and need to abort the run, you will follow these steps:

1. Select “Profile Actions”, then select “Terminate”.

2. Select “Profile Actions” again, and then select “Cancel”.
